Maternal Health Nursing Assessment System

REFERRAL DOCUMENT

PATIENT INFORMATION

Montefalco, Elijah Riley V.

Patient ID: MOM-2026-005

Date of Birth: 1996-07-10T00:00:00.000Z

Type of Visit: Emergency Consultation

Risk Level: MODERATE *(Prevention: Secondary)*

CLINICAL ASSESSMENT (STEP 1: ASSESSMENT)

Chief Complaint: ehcadaeh

Blood Pressure: 160/100

Heart Rate: 110 bpm

Temperature: 40°C

Respiratory Rate: 33 cpm

O, Saturation: 94%

Pain Scale: 7/10

HEALTH HISTORY (STEP 2: HEALTH HISTORY)

Medical & Surgical History

Past Medical History: pyh

DIAGNOSIS (STEP 4: DIAGNOSIS)

NANDA-I Nursing Diagnosis: 00276 — Ineffective Health Self-Management

(NANDA Code: 00276)

Related to: Ineffective Health Self-Management

ICD-10 Diagnosis: O14.0 (Mild to moderate pre-eclampsia)

AI-ASSISTED SUMMARY (STEP 5: AI SUMMARY)

Rationale

Based on clinical assessment, the following findings indicate moderate-risk status requiring close monitoring: Hypertension Stage 2: 160/100; Maternal tachycardia: 110 bpm; High fever: 40°C - may affect fetus; Tachypnea: 33 breaths/min; Preeclampsia/Eclampsia diagnosis recorded. Interventions selected follow the ADPIE nursing process, aligned with NIC/NANDA/NOC classifications, and comply with DOH National Safe Motherhood Program guidelines and WHO safe motherhood recommendations. Continue routine prenatal monitoring per DOH protocol.

Risk Indicators:

- Patient risk level assessment: low
- Hypertension Stage 2: 160/100
- Maternal tachycardia: 110 bpm
- High fever: 40°C - may affect fetus
- Tachypnea: 33 breaths/min
- Preeclampsia/Eclampsia diagnosis recorded

Priority Intervention:

Vital Signs Monitoring

Nursing Considerations:

- Consider Filipino cultural practices: involve family in care decisions, use simple Tagalog, acknowledge traditional practices while guiding toward evidence-ba
- Assess financial constraints and discuss PhilHealth Maternity Care Package coverage.

Follow-up Schedule: Return in 3-5 days for BP monitoring and proteinuria check. Contact immediately if severe headache, visual changes, or epigastric pain develop.
